R topics documented:

<code>get_lang</code>	1
<code>get_supported_lang</code>	2
<code>languageR</code>	3

get_lang	<i>Get language</i>
----------	---------------------

Description

Detect language from a character string.

Usage

```
get_lang(query, api_key = NULL)
```

Arguments

query	the character string you want to detect the language from.
api_key	your API key.

Details

Takes a character string, returns a data.frame with the available values.

Value

Returns a data.frame with the detected languages, in descending order of probability. Values are : language_code, language_name, probability (length of the provided query text and how well it is identified as a language), percentage (confidence margin between multiple matches), and reliable_result (whether or not the API is completely confident about the main match).

Note

Before running a function of this package for the first time, you need to get your API key.

Examples

```
## Not run:
get_lang(query = "I really really love R and that's a good thing, right?", api_key = "apikey")

## End(Not run)
```

get_supported_lang	<i>Get supported languages</i>
--------------------	--------------------------------

Description

Get all current available languages on the languagelayer API.

Usage

```
get_supported_lang(api_key = NULL)
```

Arguments

`api_key` Your API key.

Details

Returns a data.frame with the available languages.

Value

Returns a data.frame with `language_code` and `language_name`.

Note

Before running a function of this package for the first time, you need to get your API key.

Examples

```
## Not run:
get_supported_lang(api_key = "yourapikey")

## End(Not run)
```

languageR	<i>languageR</i>
-----------	------------------

Description

Access the 'languageR' API.
